AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions

of claims in the application:

Claim 1 (currently amended): A method of organizing and effecting a dynamic and comprehensive

workflow management system for an entity in control of various kinds of machinery, said workflow

management system using a computer network that permits computer access to a server capable of

containing a centralized database pertaining to said workflow management system, said method

comprising:

identifying all of the individual core management functions that relate to the overall

management of all of the machinery controlled by an entity, said overall management

encompassing the entire life cycles of said machinery, said core management functions consisting

of internal core management functions and external core management functions, each said internal

core management function involving specialized management of a business aspect of said overall

management, each said external core management function involving specialized management of a

technical aspect of said overall management, said internal core management functions including

contracts management, budget management, and facilities management, said external core

management functions including life cycles management and engineering management, said

engineering management involving at least one type of engineering related to said machinery

including in-service said machinery, said at least one type of engineering being selected from the

group consisting of data engineering, design engineering, installation engineering, and maintenance

engineering;

Serial No.: 09/671,871

Amendment

producing information pertaining to said core management functions, said information

including plural individual workflow descriptions, each said individual workflow description

describing a said core management function and establishing at least one linkage of said individual

workflow description with at least one other said individual workflow description;

establishing core management function units, said core management function units at least

substantially representing said core management functions;

formulating uploading to said server for storage in said centralized database a coherent

presentation essentially integrating said information, said coherent presentation encompassing a

multiplicity of tasks, said coherent presentation representing an operational plan for performing all

of said tasks, the performance of each said task commencing in a said core management function

unit, at least some said tasks being performed in plural said core management function units based

on said at least one linkage of said individual workflow description with at least one other said

individual workflow description;[[,]]

uploading said coherent presentation to said server for storage in said centralized database,

said coherent presentation being computer-accessible by said core management function units;

performing at least one said task, said performance of at least one said task including use of

said coherent presentation; and

updating said coherent presentation at least once, each said updated coherent presentation

being computer-accessible by said core management function units, each said updating including

uploading at least a portion of a said individual workflow description describing a said core

management function so as to render at least one change to the preceding said individual workflow

Serial No.: 09/671,871

Amendment

description describing the same said core management function, said at least one change including

modification with respect to said at least one linkage of said individual workflow description with at

least one other said individual workflow description.

Claim 2 (previously presented): The method according to claim 1, wherein said external core

management functions further include at least one external core management function selected from

the group consisting of acquisition management, research and development management, test and

evaluation management, integrated logistic support management, program management, and

platform management.

Claim 3 (previously presented): The method according to claim 1, wherein said identified external

core management functions further include acquisition management, research and development

management, test and evaluation management, integrated logistic support management, program

management and platform management.

Claim 4 (previously presented): The method according to claim 2, wherein said life cycles

management is the linchpin external core management function for all of said external core

management functions.

Claim 5 (previously presented): The method according to claim 3, wherein said life cycles

management is the linchpin external core management function for all of said external core

management functions.

Claims 6-9 (canceled)

Claim 10 (previously presented): The method according to claim 1, wherein each said individual

workflow description includes narrative description, procedural description and flow diagrammatic

description.

Claim 11 (previously presented): The method according to claim 1, wherein said coherent

presentation includes a manual, wherein said manual includes narrative description, procedural

description and flow diagrammatic description for each core function.

Claim 12 (previously presented): The method according to claim 1, wherein said external core

management function units include a life cycle management unit and an engineering management

unit, and wherein said external core management function units further include at least one external

core management function unit selected from the group consisting of acquisition management unit,

research and development management unit, test and evaluation management unit, in-service

engineering management unit, integrated logistic support management unit, program management

unit, and platform management unit.

Claim 13 (previously presented): The method according to claim 1, wherein said internal core

management function units include a facilities management unit, a budget management unit, and a

contracts management unit.

Claim 14 (previously presented): The method according to claim 1, wherein:

said external core management function units include a life cycle management unit and an

engineering management unit;

said external core management function units further include external core management

function units selected from the group consisting of acquisition management unit, research and

development management unit, test and evaluation management unit, integrated logistic support

management unit, program management unit and platform management unit; and

said internal core management function units include a facilities management unit, a budget

management unit, and a contracts management unit.

Claim 15 (previously presented): The method according to claim 1, wherein:

said external core function management units include including a life cycle management

unit, an acquisition management unit, a research and development management unit, a test and

evaluation management unit, an engineering management unit, an integrated logistic support

management unit, a program management unit, and a platform management unit; and

said internal core function management units include a facilities management unit, a budget

management unit, and a contracts management unit.

Claim 16 (previously presented): The method according to claim 1, said method further comprising

instituting communications among said core management function units, said instituting

communications including instituting at least one type of communications selected from the group

consisting of telephone, telefax, paper correspondence and electronic mail.

Claim 17 (previously presented): The method according to claim 1, said method further comprising

distributing hard copies of said coherent presentation among said core management function units.

Claim 18 (previously presented): The method according to claim 1, wherein said producing

information pertaining to said core management functions includes establishing plural teams, each

said team being charged with submitting a section of said information that characterizes a different

said core management function.

Claim 19 (previously presented): A method for defining and executing the flow of management

operations of an organization that controls a variety of machinery, said method making use of a

central computer and plural workstation computers connected to said central computer, said method

comprising:

Serial No.: 09/671,871

Amendment

establishing plural organizational units, each said organizational unit availing itself of at least one said workstation computer, said establishing including proposing initial core functions and assembling informational segments, each said informational segment describing the functional flow associated with a said initial core function, the functional flow associated with each said initial core function being characterized by at least one nexus between said functional flow and the functional flow associated with at least one other said initial core function, said establishing plural organizational units further including designating refined core functions, said refined core functions at least substantially corresponding to said initial core functions, each said organizational unit performing a said refined core function, said refined core functions being every core function relating to the overall management of every item of machinery controlled by an organization, said overall management encompassing the entire life cycles of said machinery, said refined core functions consisting of internal refined core functions and external refined core functions, each said internal refined core function involving specialized management of a business aspect of said overall management, each said external refined core function involving specialized management of a technical aspect of said overall management, said internal refined core functions including contracts management, budget management, and facilities management, said external refined core functions including life cycles management and engineering management, said engineering management involving at least one engineering area related to said machinery including said machinery that is in service, said at least one engineering area being selected from the group consisting of data engineering, design engineering, installation engineering, and maintenance engineering;

formulating a manual that is at least substantially arranged in accordance with said organizational units and said refined core functions respectively performed by said organizational units, said manual covering at least substantially all of the undertakings of said organization, said

manual at least substantially incorporating said informational segments so as to prescribe said flow

of management operations both intrarelationally within each said organizational unit and

interrelationally between said organizational units, the functional flow associated with each said

refined core function being characterized by at least one nexus between said functional flow and the

functional flow associated with at least one other said refined core function, said manual prescribing

action to be taken for carrying out each said undertaking, each said undertaking requiring action to

be taken by at least one said organizational unit, at least some said undertakings requiring action to

be taken by at least two said organizational units, wherein each said undertaking that requires action

to be taken by at least two said organizational units is carried out in accordance with at least one

said nexus between two said functional flows associated with said refined core functions

respectively performed by said at least two said organizational units;

storing said manual in said central computer for computer access by said organizational

units, said manual being stored in a form electronically modifiable by each said organizational unit;

carrying out at least one said undertaking, at least one said undertaking being carried out so

that action is taken by at least two said organizational units; and

maintaining currency of said manual as stored in said central computer, said maintaining

currency including electronically modifying of said manual, by at least one said organizational unit,

with respect to at least one nexus between the respective functional flows associated with at least

two said refined core functions.

Claim 20 (previously presented): The method for defining and executing the flow as recited in

Serial No.: 09/671,871

Amendment

claim 19, said method further comprising disseminating hard copies of said manual to said

organizational units.

Claim 21 (previously presented): The method for defining and executing the flow as recited in

claim 19, wherein said external refined core functions further include acquisition, research and

development, test and evaluation, integrated logistic support unit, program management, and

platform management.

Claims 22-23 (canceled)

Claim 24 (previously presented): The method for defining and executing the flow as recited in

claim 19, said method further comprising enabling communication among said organizational units

in furtherance of said flow of management operations, wherein said enabling communication

includes instituting at least two communication means selected from the group consisting of

telephone, telefax, correspondence and e-mail.

Claim 25 (previously presented): The method for defining and executing the flow as recited in

claim 19, said maintaining currency including formulating a scheduling policy for continually

improving said flow of management operations, said formulating a scheduling policy including

prescribing the periodic updating of said manual.

Claim 26 (previously presented): The method for defining and executing the flow as recited in

claim 25, wherein said periodic updating of said manual includes said electronically modifying of

said manual.

Claim 27 (previously presented): The method for defining and executing the flow as recited in

claim 19, wherein said electronically modifying of said manual includes adding at least one nexus

between the respective functional flows associated with at least two said refined core functions.

Claim 28 (previously presented): The method for defining and executing the flow as recited in

claim 19, wherein said electronically modifying of said manual includes removing at least one

nexus between the respective functional flows associated with at least two said refined core

functions.
